language plays a central role in human life however the term language as defined in the language sciences of the 20th century and the traditions these have drawn on have arguably limited our thinking about what language is and does the two inter linked volumes of thibault s study articulate crucially important aspects of an emerging new perspective shift on language the distributed language view that is now receiving more and more attention internationally rejecting the classical view that the fundamental architecture of language can be localised as a number of inter related levels of formal linguistic organisation that function as the coded inputs and outputs to each other the distributed language view argues that languaging behaviour is a bio cultural organisation of process that is embodied multimodal and integrated across multiple space time scales thibault argues that we need to think of human languaging as the distinctively human mode of our becoming

and being selves in the extended human ecology and the kinds of experiencing that this makes possible paradoxically this also means thinking about language in non linguistic ways that break the grip of the conventional meta languages for thinking about human languaging thibault s book grounds languaging in process theory languaging and the forms of experience it actualises is always an event not a thing that we use in taking a distinctively interdisciplinary approach the book relates dialogical theories of human sense making to the distributed view of human cognition to recent thinking about distributed language to ecological psychology and to languaging as inter individual affective dynamics grounded in the subjective lives of selves in taking this approach the book considers the coordination of selves in social encounters the emergent forms of self reflexivity that characterise these encounters and the implications for how we think of and live our human sociality not as something that is mediated by over arching codes and systems but as emerging from the endogenous subjectivities of selves when they seek to coordinate with other selves and with the situations artefacts social institutions and technologies that populate the extended human ecology the two volumes aim to bring our understanding of human languaging closer to human embodiment experience and feeling while also showing how languaging enables humans to transcend local circumstances and thus to dialogue with cultural tradition volume i focuses on the shorter timescales of bodily dynamics in languaging activity volume ii integrates the shorter timescales of body dynamics to the longer cultural historical timescales of the linguistic and cultural norms and patterns to which bodily dynamics are integrated
